

## ABSTRACT OF THE DISCLOSURE

The invention relates to assembly means (101) for parts, comprising at least one weld bead (106,206) produced by transparency and intended to fix at least two parts (2, 4) to each other, each weld bead (106) having a start point (114) and an end point (126). According to the invention, at least one weld bead (106) defines at least one closed line (116,124) delimiting an internal zone (117, 125) within which at least one of said start and end points (114,126) of this weld bead (106) is located.

Particularly applicable to the domain of assembling components of automobile vehicle bodies.
